**Note:** B.Sc. I, II, III year practical's includes Studies of growth and life activities of microorganisms.

These Studies needs two consecutive days for completion of practical

#### Workload:

- **1. Theory:** Per paper per week three periods
- **2. Practical:** Per batch per week one practical (Four periods) for two consecutive days (04+04=08 periods)

#### INTRODUCTION

Microbiology has been at the forefront of research in industry, environment, agriculture, food, dairy, medicine and biology. It is one of the rapidly growing and applied areas of the science. There many job opportunities available for student in this stream. Industrial production and management are some of the areas in which trained manpower is needed.

Microbiology is one of the optional subjects for B.Sc. degree course of three years. Students passed 10+2 are eligible for admission. Language of Medium is English. Microbiology curriculum (Course structure) for B. Sc III year is given as per Annexure-1.

The pattern of question paper, standard of passing is as per norms given by BOE of Rajarshi Shahu Mahavidyalaya, Latur (Autonomous)

The admission procedure for course is as per college norms.

Teacher's qualifications are as per UGC norms.

The list of laboratory Equipments and Instruments are as per Annexur-2.

### GENERAL OBJECTIVES OF THE PROGRAMME

- The syllabus of course is designed to provide knowledge which is useful for making carrier in related fields.
- To promote students for self employment.
- To provide basic knowledge and skills to promote students in research and social scientific awareness.

#### LEARNING OBJECTIVES OF THE COURSE

The syllabus of course is designed to provide knowledge which is useful for making carrier in related fields.

To promote students for self-employment.

To provide advanced knowledge and skills to promote students in life sciences research.

To develop social scientific awareness among the students.

### MICROBIOLOGY COURSE OUTCOMES:

- 1. Becoming a graduate, The Microbiology students acquire a meticulous knowledge and understanding of the basic concepts of different Microbiology disciplines.
- 2. Microbiology students will be able to describe the basic concepts of bacterial mutations, damage of DNA and its repair mechanisms, the genetic exchange, transposition and recombination processes.
- 3. Microbiology students will be able to: Describe enzymes- the bio catalysts with reference to its properties, kinetics, inhibition, regulation Understand and elucidate the bacterial metabolic pathways leading to energy yielding processes.
- 4. Microbiology students will be able to exploit the highly advanced molecular and gene cloning techniques. Learn the applications of recombinant DNA technology for human and plant welfare.
- 5. After successful completion of the Skill Enhancement Course-Food fermentation techniques students will acquire the knowledge about role and application of microbial techniques and skills in production and safe handling of fermented foods.
- 6. Microbiology students will be able to: Learn different microbial industrial production techniques, describe the role of microorganisms in production of various secondary metabolites of human benefit by fermentation processes.
- 7. After successful completion of this course Skill Enhancement Course BIO-ANALYTICAL TOOLS, students are expected to be able to handle advanced instruments for analysis apply this knowledge for research.

### RAJARSHI SHAHU MAHAVIDYALAYA, LATUR

# B. Sc. Third year (Semester - V) MICROBIOLOGY PAPER NO. IX – MOLECULAR MICROBIOLOGY

Maximum Marks: 50 Lectures: 45

### **Course Objective:**

- 1. To make the students to understand the molecular biology
- 2. To make the students know the modern techniques of genetic engineering.

### **Course Outcomes:**

- 1. Microbiology students will be able to describe the gene and its expression
- 2. Able to exploit the highly advanced molecular and gene cloning techniques.

### UNIT - I DNA: Structure, replication and properties

10L

- 1.1 Structure
- 1.2 Properties: physical, chemical, spectral and thermal stability
- 1.3 Stability of DNA and its information content
- 1.4 Replication of DNA
- 1.5 DNA methylation in prokaryotes

### **UNIT - II Genes and Genomes**

10L

- 2.1 Genome and Plasmon
- 2.2 Bacterial plasmids
- 2.3 Genes, Recon, muton, cistron
- 2.4 Genes within a Gene. Genome size
- 2.5 Genome organization: E. coli, and T4 genes and genome

### **UNIT – III Gene Expression**

10L

- 3.1 Transcription: Structure of RNA Polymerase (RNAP), Structure of mRNA and the Process of transcription
- 3.2 Characteristics of Genetic code: (Triplet code, comma free, non-overlapping, degenerate, start and stop signals and wobble hypothesis)
- 3.3 Translation: Structure of Ribosomes, t-RNA and the Process of Translation
- 3.4 Regulation of gene Expression:
  - i) The *lac* Operon of *E. coli*
  - ii) The trp Operon of E. coli

### **UNIT - IV Gene cloning**

15L

- 4.1 Introduction, Definition and Purpose of Cloning
- 4.2 Outline of gene cloning procedure (shot gun method)
- 4.3 Cloning vectors: pBr322, Cosmids, M13
- 4.4 Insertion of target DNA into vector: Cohesive end ligation, blunt end ligation, homopolymer tailing, use of linkers and adaptors
- 4.5 Gel Electrophoresis

- 4.6 Methods of gene transfer: CaCl2Transformation, Electroporation, Liposome fusion, Transfection
- 4.7 Screening Strategies (In brief)
  - i. Insertional inactivation
  - ii. Immunochemical methods
  - iii. Colony hybridization
- 4.8 Applications of gene cloning: cDNA cloning of human insulin gene in *E.coli*

## B. Sc. Third year (Semester – V) Practical

Maximum Marks: 50 Periods: 45

### Lab Course-MB 07, U-MIB-567

**Course Objective:** To study gene expression, advanced molecular biology techniques.

**Course outcome:** A student successfully completing **Lab course MB07** will exhibit ability to:

Design experiments to exhibit gene expression in bacteria; perform highly advanced molecular technique using gel electrophoresis and PCR

### **Experiments**

[Based On Theory Paper IX]

- 1. Studies on gene expression in *E. coli* with reference to Lac operon.
- 2. Isolation of chromosomal DNA (bacteria/ fungi)
- 3. Isolation of plasmid DNA
- 4. Agarose gel electrophoresis of DNA(**Demonstration**)
- 5. Restriction digestion and agarose gel electrophoresis of DNA (**Demonstration**)
- 6. Isolation of bacterial DNA from Soil/ Water/ Food/ blood, PCR amplification and confirmation by gel electrophoresis
- 7. Amplification of DNA by PCR.
- 8. RFLP analysis using gel electrophoresis (**Demonstration**)

### RAJARSHI SHAHU MAHAVIDYALAYA, LATUR

### B. Sc. Third year (Semester - V)

Semester Pattern

### **MICROBIOLOGY**

### PAPER NO. X –BIOCATALYST and MICROBIAL METABOLISM

Maximum Marks: 50 Periods: 45

### **Course Objectives:**

To understand basic principles of enzymology.

To gain knowledge about microbial metabolism.

### **Course Outcomes:**

Completing fifth semester, the Microbiology students will be able to: Describe enzymes- the bio catalysts - with reference to its properties, kinetics, inhibition, regulation Understand and elucidate the bacterial metabolic pathways leading to energy yielding processes.

.....

### Unit-I Enzymes, enzyme kinetics and immobilization

12 L

- 1.1 Importance and definition,
- i. structure of enzyme, physico chemical nature, Apoenzyme and cofactors. Prosthetic group, coenzymes and metal cofactors.
  - ii Active site and its silent features
  - iii. Classification of enzymes
  - iv. General properties of enzyme
  - v. Types of enzymes: extracellular, intracellular, constitutive, inducible, endoenzyme and exoenzyme
  - vi. Mechanism of enzyme action –Lock and key hypothesis, induced fit model.
- 1.2 Enzyme kinetics
  - i. Michaelis-Menten equation
  - ii. Applications (Lineweaver-Burk Plot)
- 1.3 Factors influencing enzyme activity
  - i. Temperature
  - ii. pH
  - iii. Substrate concentration
  - iv. Enzyme concentration

			. •					
V.	Δ	~1	ŀ۱	17	2	t,	٦r	C
ν.	$\overline{}$		u	·v	а	u	"	. 7

vi. Redox Potential

### **Unit-II Enzyme inhibition and Regulation**

11 L

- 2.1 Enzyme inhibition
  - i. Reversible Inhibition
  - ii. Competitive Inhibition
  - iii. Non-Competitive Inhibition
  - iv. Uncompetitive Inhibition
  - v. Irreversible Inhibition
  - vi. Substrate and Product Inhibition,
  - vii. Allosteric Inhibition
- 2.2 Allosteric enzymes
- 2.3 Isoenzymes

### **Unit-III: Chemoheterotropic Microbial Metabolism: Aerobic respiration**

**12L** 

- 3.1 Definitions: i. Metabolism ii. Catabolism iii. Anabolism
- 3.2 Energy yielding biochemical process
  - i. Role of ATP in metabolism
  - ii. Role of reducing power in metabolism
  - iii. Modes of ATP generation.
- 3.3 RETC (Respiratory Electron Transport Chain)
- 3.4 Biochemistry of fueling reaction in heterotrophs
  - i. EMP (Embden Meyerhof Parnas pathway)
  - ii. HMP (Hexose Monophosphate Pathway)
  - iii. ED (Entner Doudoroff Pathway)
  - iv. PKP (Phosphoketolase Pathway)
  - v. TCA (Tri Carboxylic Acid cycle)

# Unit-IV : Chemoheterotropic Microbial Metabolism: Anaerobic respiration and Fermentations 10L

- 4.1 Anaerobic respiration definition and example
- 4.2 Alcohol Fermentation

Ethanol fermentation by Yeasts, the Pasteur effect,

Ethanol Fermentation by Bacteria

- 4.3. Lactate Fermentation i. Homo and Hetero Fermentative Pathways
- 4.4 Mixed Acid and Butanediol Fermentation
- 4.5 Butyrate and Butanol- Acetone Fermentation

4.6 Propionic acid fermentations

### **References:**

- 4. Bacterial Metabolism by Gerhard Gottschalk, 2nd Springer International Edition, Publisher: Springer Verlag Inc., New York
- 5. Bacterial Metabolism by H.W. Doelle, 2nd Academic Press International Edition, Publisher: Elsevier, New Delhi

### B. Sc. Third year (Semester -V)

### **PRACTICAL** based on Paper X

Maximum Marks: 50 Periods: 45

### Lab Course-MB 08, U-MIB-568

### **Course objectives:**

To study Enzymes and enzyme kinetics

To study Enzymes immobilization.

**Course outcomes:** A student successfully completing **Lab course MB 08** will exhibit ability to:

Design and perform experiments to study different enzyme activities, kinetics and immobilization of enzyme which has got academic and industrial importance

- 1. Study of enzymes (Lecithinase, Gelatinase, Lipase, Casienase, Catalase, Cellulase).
- 2. Estimation of enzyme activity and determination of Km.
- 3. Effect of various physicochemical parameters on amylase activity (pH, Temp).
- 4. Fermentative production of Production of amylase.
- 5. Immobilization of enzyme by alginate method.
- 6. Isolation of hydrocarbon degrading microorganisms
- 7. Study of bio-surfactant producing Microorganisms

### RAJARSHI SHAHU MAHAVIDYALAYA, LATUR

# B. Sc. Third year (Semester - V) Semester Pattern MICROBIOLOGY

**Discipline Specific Elective: I** 

### ADVANCED MOLECULAR MICROBIOLOGY

Maximum Marks: 50 Lectures: 45

### **Course Objective:**

To make the students to understand the Advanced areas of molecular biology. To make the students to recognize the modern techniques of genetic engineering.

#### **Course Outcomes:**

Microbiology students will be able to exploit the highly advanced molecular and gene cloning techniques.

Learn the applications of recombinant DNA technology for human and plant welfare.

### **UNIT – I: Introduction to recombinant DNA technology**

10L

- 1.1 A brief history of recombinant DNA technology
- 1.2 DNA: Structure and Properties- physical, chemical, spectral and thermal
- 1.3 Restriction enzymes: Types, nomenclature, mode of action
- 1.4 Modification enzymes: DNA polymerase, terminal deoxynucleotidyl transferase, Kinase, Phosphatase and DNA ligase
- 1.5 Cloning vectors: Plasmids- characteristics, pBR and pUC vectors, Bacteriophage lambda and M13, Cosmids, Artificial chromosome vectors-BACs, YACs, Expression vectors

### UNIT – I: Methods in recombinant DNA technology

10L

- 2.1 Insertion of target DNA into vector: Cohesive end ligation, blunt end ligation, homopolymer tailing, use of linkers and adaptors
- 2.2 Methods of gene transfer: Transformation, Electroporation,
- 2.3 Gene delivery: liposome, biolistic method (gene gun), Transfection, agrobacterium mediated gene transfer
- 2.4 Screening methods: Insertional inactivation, Immunochemical methods, Colony hybridization

### **UNIT – III Advanced techniques in recombinant DNA technology**

15L

3.1 Analytical methods: Agarose gel electrophoresis, Southern and Northern blotting techniques, SDS-PAGE and western blotting

- 3.2 PCR: different types and applications Genetic markers: RFLP, RAPD, AFLP and DNA fingerprinting
- 3.3 DNA sequencing: Maxam and Gilbert's method, Sanger's method

### **UNIT – IV: Applications of recombinant DNA technology**

10L

- 4.1 Shot gun cloning
- 4.2 cDNA cloning: Insulin, Human growth hormon
- 4.3 Bt cotton, Flavr Savr Tomato
- 4.4 Gene therapy, recombinant vaccine

### **References:**

### Lab Course-DSE: MB-I Practicals based on DSE-I

Maximum Marks: 50 Periods: 45

### **Course objectives:**

To study and execute the techniques related to Advanced molecular biology **Course outcomes:** A student successfully completing **Lab course MB** will exhibit ability to:

- 1. Design and perform experiments to study Chromosomal DNA isolation, quantification, restriction and analysis.
  - 2. To understand the process of transformation
  - 1. Studies on gene expression in *E. coli* with reference to Lac operon.
  - 2. Isolation of chromosomal DNA (bacteria/ fungi)
  - 3. Isolation of plasmid DNA
  - **4.** Agarose gel electrophoresis of DNA(**Demonstration**)
  - **5.** Restriction digestion and agarose gel electrophoresis of DNA (**Demonstration**)
  - **6.** Isolation of bacterial DNA from Soil/ Water/ Food/ blood, PCR amplification and confirmation by gel electrophoresis
  - 7. Amplification of DNA by PCR.
  - **8.** RFLP analysis using gel electrophoresis (**Demonstration**)

# SKILL ENHANCEMENT COURSE SEC: I

### **Fermentation Technology**

Marks-50 Credits-02

### Course objectives-

- 1. To explain the advantages and health benefits of fermented foods
- 2. To demonstrate the role of microorganisms in production of fermented daily foods
- 3. To develop skills and techniques for production of fermented food products

**Course outcomes** – After successful completion of this Skill Enhancement Course II, will acquire the knowledge about role and application of microbial techniques and skills in production and safe handling of fermented foods

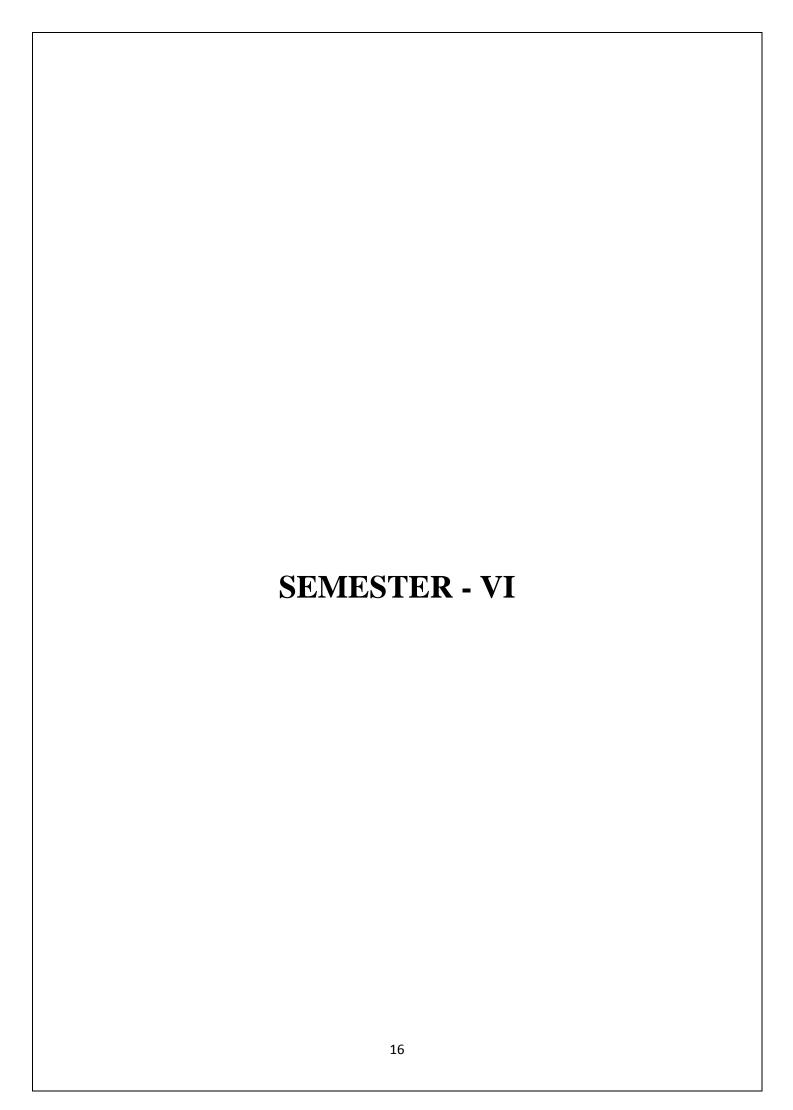

- **Unit I:** Fermented Foods and Probiotic Foods Definition, types, advantages and health benefits
- **Unit II:** Milk Based Fermented Foods Dahi, Yogurt, and cheese: Preparation of inoculums, types of microorganisms and production process
- **Unit III:** Vegetable Based Fermented Foods Pickels, Saeurkraut: Microorganisms and production process
- Unit IV: Grain Based Fermented Foods Bread, Idli and Dosa: Microorganisms and production process

### **Practicals:**

- 1. Isolation of bacteria from fermented food materials Dahi, / Yogurt/ Pickles
- 2. Isolation of fungi from fermented food materials Cheese/ Bread
- 3. Preparation of inoculum for milk based fermented foods
- 4. Production of Pickle / Idli

### RAJARSHI SHAHU MAHAVIDYALAYA, LATUR

### **B. Sc. Third year (Semester - VI)**

Semester Pattern

## MICROBIOLOGY PAPER XI – MICROBIAL GENETICS

Maximum Marks: 50 Periods: 45

### **Course Objectives:**

To make the students to understand the mutations and repair mechanisms of damaged DNA.

To make the students aware of recombination and gene exchange processes in bacteria.

### **Course outcomes:**

Completing fifth semester, the Microbiology students will be able to: Describe the basic concepts of bacterial mutations, damage of DNA and its repair mechanisms, the genetic exchange, transposition and recombination processes.

Unit – I Mutations 10L

- 1.1 Types of Mutations: Somatic, Germ line, Base substitutions, Frame shift, Supresser, Phenotypic effect of mutations
- 1.2 Spontaneous mutation: Mispairing of Bases due to Tautomerism, Deamination, Depurination and Damage due to Oxidative Metabolism
- 1.3 Evidences for spontaneous mutations: Replica plate techniques, Fluctuation test
- 1.4 Induced mutations: Physical and Chemical Mutagenic agents
- 1.5 Ames Test to identify chemical mutagens

### **Unit – II Repair of DNA damage**

10L

- 2.1 Introduction
- 2.2 Photo-reactivation
- 2.3 SOS system
- 2.4 Nucleotide Excision Repair (NER)
- 2.5 Base Excision Repair (BER)
- 2.6 Mismatch Excision Repair (MER)

### **Unit – III Recombination and transposable elements**

11L

- 3.1Types of recombination process:
- i) Homologous Recombination in *E. coli* (Holliday Model) Initiation, Synapsis, Branch Migration and resolution.

- ii) Site Specific Recombination (Integrative and Excessive Recombination)
- iii) Illegitimate Recombination (Non-Homologus Recombination)
- 3.2Transposition:
- i. Transposable Elements in Prokaryotes
- ii. Insertion sequences, Transposons

### Unit – IV Gene transfer in bacteria

14I.

- 4.1 Transformation
- a. Mechanism of transformation (Competence, Binding, Penetration, Synapsis and Integration)
- 4.2 Conjugation
  - i. Discovery of conjugation in bacteria
  - ii. Mechanism of Conjugation
  - iii. Formation of Hfr, F' and Sexduction
- 4.3 Transduction
  - i. Discovery of transduction in bacteria
  - ii. Generalized and Specialized transduction
  - iii. Abortive transduction

- 10. Principles of Genetics by R. H. Tamarin, (2004) Publisher: Tata McGraw Hill.

### B. Sc. Third year (Semester – VI)

### **Microbiology -PRACTICAL**

Maximum Marks: 50 Periods: 45

# Lab Course-MB- 09, U-MIB-667 Practicals based on Paper no. XI – MICROBIAL GENETICS

.....

**Course objectives:** To study bacterial mutations, recombination, Enzyme kinetics and immobilization.

**Course outcomes:** A student successfully completing **Lab course MB09** will exhibit ability to:

Design and perform experiments to study bacterial mutations, genetic exchange and activities which have got academic and industrial importance.

### **Experiments**

### (Based on Paper-XI)

- 1. Replica plate Technique.
- 2. Effect of UV radiations to study the survival pattern of *E. coli* /yeast.
- 3. Repair mechanisms in *E.coli* / yeast (Dark and Photo reactivation)
- 4. Isolation of antibiotics resistant Bacterial Mutants by Physical mutagenesis
- 5. Isolation of antibiotic resistant mutants by chemical mutagenesis.
- 6. Ampicillin selection method for isolation of auxotrophic mutants.
- 7. Study of Conjugation in *E. coli*.
- 8. Isolation of lac mutant of E coli

### RAJARSHI SHAHU MAHAVIDYALAYA, LATUR B. Sc. Third year (Semester - VI) MICROBIOLOGY

Maximum Marks: 50 Lectures: 45

### PAPER NO. XII - Industrial Microbiology

### **Course Objectives**

To understand scope of microbial technology and different techniques related to industrial fermentations, QC and GMP.

#### **Course Outcomes:**

Completing sixth semester, the Microbiology students will be able to: Learn different microbial industrial production techniques, describe the role of microorganisms in production of various secondary metabolites of human benefit by fermentation processes.

.....

### UNIT I: Introduction to Industrial microbiology and fermentation processes Lectures-09

- 1.1. Introduction, Brief history and development of Industrial Microbiology.
- 1.2. Design of stirred tank fermentor and role of different parts.
- 1.3. Types of Fermentor: laboratory fermentor, pilot plant fermentor, Horton sphere.
  - , fluidised bed reactor, Air lift fermentor (In brief).
- 1.4. Types of fermentation processes: Batch, fed batch, continuous and solid state fermentation . surface and submerged fermentations.

### UNIT II: Isolation of industrially important microbial strains and formulation of fermentation media Lectures-12

2.1 Isolation of industrially important microbial strains - Screening Techniques (Primary and secondary), Strain improvement (Basic idea in brief),

- 2.2. Stock culture and its maintenance (serial subculture, overlaying with mineral oil, lyophilization, liquid nitrogen, soil stock).
- 2.3. Inoculum development, Fermentation media, (substances used as raw materials for formulation of fermentation media) and its sterilization (batch and continuous).

### **UNIT III: Down stream processing**

### **Lectures-12**

- 3.1 Introduction, Recovery and purification of fermentation products
- 3.2 Solids (Insolubles) removal (Filtration, centrifugation, coagulation and flocculation, foam fractionation), Cell disruption.
- 3.3 Recovery of product (liquid extraction, ion exchange adsorption, precipitation), Purification (Chromatography, carbon decolorization, crystallization),
- 3.4 Product Isolation (Crystalline processing, drying, packing etc).
- 2.4. Bioassays Bioassay of Amino acids, vitamins.
- 2.5. Bioassay- Antibiotics.
- 2.6. Quality Control Quality control tests- purity testing, Microbial Limit Test (MLT). Pyrogen testing (LAL test), Minimum Inhibitory Concentration (MIC)
- 2.7. I. P. R. and Biosafety , FDA and Good Manufacturing Practices

### **UNIT IV: Microbial production of industrial products** Lectures-12

- 4.1 Beverages (Beer, Wine),
- 4.2 Organic acid (Citric acid, lactic acid),
- 4.3 Antibiotics (Penicillin, Cephalosporein)
- 4.4 Ethanol
- 4.5 Bioinsecticide (Thuricide), Amino acids (Lysine),
- 4.6 Enzyme (Amylase and protease)

(Production strain, Fermentation media, Fermentation conditions, metabolic pathway involved in synthesis of the product, Product recovery operations, Uses).

- 7. Practical Microbiology by Maheshwari and Dubey

### **B.Sc.** Third year (Semester – VI)

### Microbiology

Maximum Marks: 50 Periods: 45

# Lab Course: MB -10, U-MIB-668 Practicals based on theory Paper No. XII – Industrial microbiology

**Course Objective:** To study primary screening and secondary methods, Bioassays and typical fermentation processes

**Course outcomes:** Students will be able to design protocols for isolation of industrially important microorganisms and fermentative production, extraction, purification and quantitative analysis of microbial products.

- 1. Primary screening of antibiotic producers, enzyme producers.
- 2. Primary screening of organic acid producers and diacetyl producer.
- 3. Bioassay of penicillin and vitamin B<sub>12</sub>.
- 4. Production of citric acid (Surface / submerged) & its estimation by Titrable acidity
- 5. Fermentative production of wine & and its estimation by titrable acidity.
- 6. Fermentative production of enzyme amylase.
- 7. Recovery of product: amylase, citric acid.
- 8. Fermentative production of ethanol

RAJARSHI SHAHU MAHAVIDYALAYA, LATUR

### B. Sc. Third year (Semester - VI) C.B.C.S

### **MICROBIOLOGY**

# Discipline Specific Elective -II AGRICULTURAL AND ENVIRONMENTAL MICROBIOLOGY

Maximum Marks: 50 Lectures: 45

### **Course Objectives-**

- 1. To study types of microorganisms in soil, microbial interactions and their role in soil fertility.
- 2. To understand production methods used for production of biofertilizers and biopesticides.
- 3. To study in brief common plant pathogens.
- 4. To study Bioremediation and Waste Water Treatment to solve environmental pollution problem.

**Course outcomes:** Upon successful completion of the course, students are expected to be able to:

- 1. Understand diversity of microorganism and microbial communities inhabiting soil.
- 2. Learn the occurrence, abundance and distribution of microorganism in the environment and their role in the environment.
- 3. Competently explain various aspects of environmental microbiology and microbial ecology and to become familiar with current research in environmental microbiology.
- 4. Understand various biogeochemical cycles Carbon, Nitrogen, Phosphorus cycles etc. and microbes involved.
- 5. Understand various plant microbes interactions especially rhizosphere, phyllosphere and mycorrhizae and their applications especially for the production of biofertilizers and biopesticides.
- 6. Understand the basic principles of environment microbiology and be able to apply these principles to understanding and solving environmental problems waste water treatment and bioremediation

UNIT I – Soil Microbiology and Microbiological interactions Lectures - 12

- 1) Soil Microbiology.
- a. Physical characters of soil.
- b. Chemical characters of soil.
- c. Types of microorganisms in soil and their role in soil fertility.
- d. Microbiological interactions Symbiosis, Commensalism, Amensalism, Parasitism, Predation.
- 2) Role of microorganisms in elemental cycle
- a. Carbon cycle. b. Nitrogen cycle c. Phosphorous cycle

## UNIT – II Biochemistry and production of biofertilizers and biopesticides Lectures – 10

- 1) Biofertilizers
- i)Nitrogen fixing Azotobacter, Rhizobium, and Azospirillum.
- ii)Phosphate Solubilizing Microorganisms.
- 2) Biopesticides a) Bacillus thuringiensis b) Tricoderma spp

### **UNIT:III Plant pathogens**

Lectures – 12

- 1. Plant Pathology
- a) Common symptoms produced by plant pathogens
- b) Modes of transmission of plant diseases.
- c) Plant diseases i) Citrus Canker ii) Tikka disease of groundnut
- iii) Bacterial Blight of Pomegranate.

### **UNIT IV** Bioremediation and Waste Water Treatment:

Lectures – 11

### 1. Bioremediation:

Definition, Role of plants & Microbes in Bioremediation of:

- a. Hydrocarbons, pesticides
- b. Industrial Wastes: (Dyes, Paper & Pulp, Heavy metals, Dairy, Distillery .
- c. Xenobiotics

### 2. Bioaugmentation:

- a. Definition
- b. Use of microbial cultures and enzymes for bioaugmentation

- c. Applications
- **3.** Genetically Modified Microorganisms in Bioremediation
- **4.** Biosorption

### **Books Recommended:**

- 1. Soil Microbiology An exploratory approach Mark Coyne.
- 2. Agricultural Microbiology N. Mukherjee and J. Ghosh.
- 3. Introduction to Soil Microbiology Martin Alexander IInd Edition.
- 4. Agricultural Microbiology Rangaswamy and Bhagyaraj IInd Edition
- 5. Plant diseases R. S. Singh.
- 6. Plant pathology R. S. Mehrotra.
- 7. Diseases of crop plants in India G. Rangaswamy.
- 8. Principles of Soil Science M. M. Rai.
- 9. Soils and Soils Fertility- 6th edition-Frederick R. Troeh (Blackwell publishing Co.)
- 10.Soil Microbiology- Singh, Purohit, Parihar. (Agrobios India, 2010)
- 11. Soil Microbiology and Biochemistry Ghulam Hassan Dar ( New India Publishing Agency, 2010 )

**Lab Course: DSE- MB-II** 

### Practical based on Discipline Specific Elective -II

### **Agricultural and Environmental Microbiology**

Maximum Marks: 50 Periods: 45

### **Course Objectives-**

To study importance of microorganisms with reference to agriculture.

To design methods used for production of biofertilizers and biopesticides.

To learn in brief common plant pathogens.

To study Bioremediation and Waste Water Treatment to solve environmental pollution problem.

**Course outcomes** Upon successful completion of the course, students are expected to be able to:

- 1. Understand diversity of microorganism and microbial communities inhabiting soil and their use in production of bifertilizers and biopesticides.
- 2. Apply microbial products for controlling plant pathogens.
- 3. Use microbes for detoxification of environment

### **Experiments**

- 1. Isolation of Azotobacter from soil.
- 2. Isolation of Xanthomonas from infected citrus fruit.
- 3. Isolation of Rhizobium from root nodules.
- 4. Isolation of phosphate solublising bacteria from soil.
- 5. Determination of BOD of sewage
- 6 .Isolation of hydrocarbon degrading microbes.
- 7.Preparation of consortium for bioremediation of dyes/industrial waste(Major experiment)

### SKILL ENHANCEMENT COURSE

### SEC-II

### **BIO-ANALYTICAL TOOLS**

\_\_\_\_\_

Marks-50 Credits-02

\_\_\_\_\_

### Course objectives-

- 4. To expertise students to handle advanced instruments.
- 5. To develop skills and techniques for analysis of valuable products
- 6. To promote students for making career in pharmaceutical industries

**Course outcomes** – After successful completion of this course SEC II - BIO-ANALYTICAL TOOLS, students are expected to be able to:

- 1. To handle advanced instruments for analysis.
- 2. Apply this knowledge for research.

### **UNIT I - Microscopy**

(9 Periods)

Phase contrast microscopy, florescence and electron microscopy (TEM and SEM).

UNIT II (12 Periods)

Principle and law of absorption fluorimetry, colorimetry, spectrophotometry (visible, UV,), centrifugation, cell fractionation techniques,F.T.I.R..

UNIT III (12 Periods)

Introduction to the principle of chromatography. Paper chromatography, thin layer chromatography, column chromatography: silica and gel filtration, affinity and ion exchange chromatography, gas chromatography, HPLC.

UNIT IV (12 Periods)

Introduction to electrophoresis. Polyacrylamide gel (native and SDS-PAGE), agarose-gel electrophoresis, , immuno- electrophoresis, Western blotting.

### **PRACTICAL**

- 1. Working and use of Phase contrast microscope
- 2. Gel electrophoresis of proteins
- 3. SDS-polyacrylamide gel electrophoresis of proteins
- 4. Separation of protein/compounds by column chromatography
- 5. Separation of amino acids by paper chromatography
- 6. To identify lipids / amino acids in a given sample by TLC

### Annexure-2

### List of the Equipments / Instruments

Sr.no.	<b>Equipments / Instruments</b>	Sr.no.	Equipments / Instruments
	Shaker 24x24 (1)	23.	Hot air oven (1)
	VDRL shaker (1)	24.	Electrophoresis kit (1)
	Autoclave (3)	25.	Magnetic stirrer (1)
	Incubator (2)	26.	Vortex mixture (1)
	Water bath (1)	27.	UV chamber (1)
	Photocolorimeter (2)	28.	Paper chromatography Assembly (1)
	Spectrophotometer (1)	29.	Refrigetor kelvinator (1)
	Warming table (1)	30.	pH meter (1)
	Heating mantle (1)	31.	Bottle washing machine (1)
•	TLC kit (1)	32.	Soxhalet accelerator (1)
•	Rough balance (1)	33.	Vacuum pump (1)
•	Fine balance (1)	35.	Pipette washing machine (1)
•	One pan balance (1)	36.	ESR assembly (1)
•	Distillation plant(steel) (1)	37.	Seitz filter assembly (1)
	Microscope with oil emulsion objective(14)	38.	Micropipette (5)
	Slide projector Automatic (1)	39.	Lab research microscope (microne) (3)
	Haemocytometer (9)	40.	Metzes optik monocular microscope model METZ_777 (2)
	Haemoglobinometer (9)	41.	Digital photoelectric meter (systronics) make type 112 (1)

•	Electronics balance (1)		Drier heavy duty Philips (1)
	Micrometer slide (2)		Vacuum cleaner.Eureks forbes make trendly model (1)
	Hot plate (1)	44.	Electronics balance contech model CA-124,0.1 mg to 120 gm (1)
22.	Homogenater (1)	45.	Distillation unit (Bhanu make) (1)
Sr.no.	Equipments / Instruments	Sr.no.	Equipments / Instruments
46.	Godrej Refrigetor  1.Model no.280 litre (30 DY)(1)  2.Model no.230 litre (24AC)(1)	52.	Anaerobic jar (kumar make) (1)
47.	Colony counter digital (1)	53.	Lab Fermenter 5 lit capacity make (DYNA biotech) (1)
48.	Orbital shaking incubator (CIS-24)with voltage stabilizer	54.	Air compressor with motor (Apollo) (1)
49.	Cooling centrifuge (C-24 BL) with voltage stabilizer	52.	Anaerobic jar (kumar make) (1)
50.	Deluxe laboratory centrifuge (R-8C) (1)		
51.	Laminar air flow microfilt(microfilt make) (1)
